

Frontline[®] Bluetooth[®] Interoperability Testing Services

Frontline can:

Improve your customer's "out of the box" experience:

- We find issues and point you to solutions before your customer experiences them.
- We test your product against a wide variety of devices in our ever-expanding library.
- Interoperability means it has to work – the first time. We'll leverage our expertise to make that happen.

Get your products tested and to market fast:

- Test plan triggers tell us if a device is failing so that you don't have to wait for the entire plan to run its course. We'll let you know and save you time.
- We work with you to decide exactly what needs to be tested and then customize your test plan to focus on your specific needs.
- Partnership with Frontline means we're looking for ways to help you identify and resolve issues fast.

Help you save money:

- Fewer testing cycles are required because we pinpoint the issues and report them to you clearly.
- Our position in the industry allows us to offer interoperability test services at jaw-dropping rates.
- We provide the right sniffer traces at affordable prices.

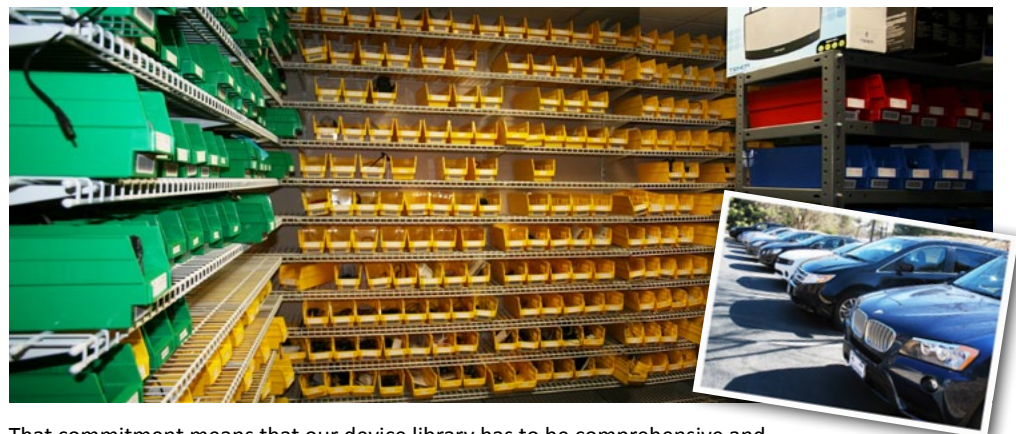

Product Testing Made Easy

Frontline's *Bluetooth* Interoperability Testing Services allow developers of *Bluetooth* wireless technology devices to leverage our unparalleled expertise and experience in the *Bluetooth* ecosystem. With Frontline as the seasoned extension of your QA department, you can be confident your products will be more robust, more reliable, and fully compatible with current industry devices and standards – all at a minimum of expense. It is a partnership we take very seriously.

Experience, Expertise and Equipment

For over 25 years, Frontline Test Equipment has developed and engineered world class protocol analyzers and test solutions. For the last decade we have focused on *Bluetooth* wireless technologies, and are actively involved in numerous industry bodies, including Continua, CTIA and the Bluetooth SIG. We know *Bluetooth* wireless technology, and our products debug, test, and verify wireless devices against EVERY *Bluetooth* specification, profile, and protocol.

Frontline *Bluetooth* protocol analyzers are the gold standard for all chip companies and device OEMs. We've spent years working with these companies and testing their devices, and now enjoy strong collaborative relationships with every major CE company in the world. We are committed to making their products better and they trust us to help them meet their goals.

That commitment means that our device library has to be comprehensive and current. In fact, our library is one of the most comprehensive in the industry, consisting of over a thousand *Bluetooth*-compatible devices, including extensive coverage of OEM car kits. How extensive? When we couldn't get the kit, we bought the car.

Frontline: The Clear Choice

For your *Bluetooth* interoperability testing, you need the people who know the technology, protocols and industry better than anyone else. There's nothing at stake but the success of your product.
